

## Clearing the Firefox cache after Koha upgrade to correct display problems

---

Sometimes after upgrading, Koha doesn't display properly. This is a browser issue. For the affected computers, you will need to clear the Mozilla Firefox cache in your browser:

- While in the browser, hit (Ctrl-Shift-Del)
- Make sure the clear cache option is set and that the time range to clear is Everything.
- Click Clear Now
- Close and reopen Firefox

If you have an older version of Firefox, updating will help as well.
